

The AirKrush glove uses innovative air-infused foam technology to protect the back of the hand from being bumped or crushed. The foam is injected directly into the glove so it lasts the life of the glove. This is a serious chemical protection glove with heavy duty impact protection. The rough finish PVC coating provides superior abrasion resistance and allows the user to maintain grip, even when working conditions are slick.

Features and Benefits:

- Made on pre-curved mold to diminish hand fatigue
- EN374-3 - Biohazard testing in air and water confirms strong protection against bacteria and waste
- Air-infused foam provides full back-of-hand protection
- EN388: 4131 - Provides good protection against abrasion
- 14" PVC coating protects hands from oil, grease, acids, caustics and alcohol
- Rough PVC finish resists abrasion and provides superior grip
- Interlock lining
